

LED DOWN LIGHT (Dimmable)

72646

Size :127x108mm (5x4.25")

Characteristics

Item Number	72646
Description	4" Square trim LED down light with junction box
Voltage	120V AC
Power	10W
Dimmable	Yes
LED Type	SMD
CRI	>90
Lumens	732 lms
Color	3000K
Life time	50,000 hours
Certificate	ETL,Energy Star,FCC,Lighting Facts,LM79,LM80

Features

- Energy efficient: save up to 80% in energy costs
- High lumen output
- Mercury-free
- Instant-on light
- For dry and damp location
- 50,000 hours lifetime
- CCT:2700-5000K
- 5 years manufacturer warranty
- Compatible with most Lutron and Leviton dimmers

Application

Easy to Install in 4 Easy Steps:

1. Shut off power before installation, Cut a corresponding hole in the ceiling. A template is provided to assist with laying out the hole location. When running the supply wires, allow an additional 18 in. of wire at each installation in order to make the electrical connections on the room side of the ceiling hole
2. Remove the Junction Box Screw(s) holding the Junction Box Cover. Pass the supply wire(s) through the appropriate knockout hole on Junction Box. Make the electrical connections to fit inside Junction Box following the ELECTRICAL CONNECTIONS. Make sure all connections are secure, tuck all wires inside Junction Box and reinstall Junction Box Cover using Junction Box Screws
3. Press the top portion of the Remodel Clips against the side of the Housing Assembly.
4. Push the Housing Assembly with the top side of the Remodel Clips through the hole until tight. Continue to push the Housing Assembly until the fixture snaps into place with the trim tight against the ceiling surface..

1. General

1.1 Product Information

Brand Name	Morris
Product Type	SSL Recessed Downlights
Model Number	72646
Rated Inputs	110-277VAC, 60Hz
Rated Power	10W
Rated Light output	732lm
Declared CCT	3000K
Power Supply	LED Driver
LED Package, Array or Module	HL-A2835DW-S1-08-HR3
Sample Code:	16063101614
Date of Receipt Samples	2016/6/31
Note	

1.2 Standards or methods

The following standards are partly or totally used or referenced for test:

No.	Name
ANSI/NEMA/ ANSLG C78.377-2011	Specifications for the Chromaticity of Solid State Lighting Products
ANSI C82.77-2002	Harmonic Emission Limits—Related Power Quality Requirements for Lighting Equipment

2. Test Conduct and Method

The lamp/luminaire was operated at least 2 hours to reach stabilization and temperature equilibrium before test.

2.1 Ambient Condition

The ambient temperature in which measurements are being taken was maintained at $25^{\circ}\text{C} \pm 1^{\circ}\text{C}$; the air flow around the sample(s) being tested did not affect the performance.

2.2 Power Supply Characteristics

The AC power supply had a sinusoidal voltage wave shape at the prescribed frequency (60 Hz) such that the RMS summation of the harmonic components does not exceed 3 percent of the fundamental during operation of the test item. The voltage of AC power supply (RMS voltage) applied to the device under test was regulated to within ± 0.2 percent under load.

2.3 Seasoning and Stabilization

No seasoning was performed in accordance with IESNA LM-79-08. And before the measurement, the sample was stabilized until the light output and power variations were less than 0.5% in 30 minutes intervals (3 readings, 15 minutes apart).

2.4 Electrical Instrumentation

The calibration uncertainties of the instruments for AC voltage and current were less than 0.2 percent, and the calibration uncertainty of the AC power meter was less than 0.5 percent (95 % confidence interval, $k=2$).

2.5 Color Measurement Method

Spectral radiant flux was measured by a sphere (2 meter)-spectroradiometer system, and the color characteristics (Color rendering index, correlated color temperature, chromaticity coordinate) were calculated from these by software automatically.

2.6 Total Luminous Flux Measurement Method

Total luminous flux was measured by both sphere-spectroradiometer system. Spectral radiant flux was measured by a sphere (2 meter)-spectroradiometer system, and the total luminous flux was calculated from these by software automatically.

2.7 Luminous Intensity Distribution Measurement Method

Luminous intensity distribution was measured by a mirror-type goniophotometer (Type C) which can keep the sample in burn position when the tests conduct, and the kinds of graph were generated by software automatically.

2.8 Spatial Non-uniformity of Chromaticity

The customer did not require this measurement.
